Aura Tracker – PRD (Single Page Version)

Platform: Mobile (Android WebView / browser), single-file HTML **Storage:** LocalStorage (no login, no backend) **Version:** 1.0 (simplified)

---

1. Overview

Aura Tracker is a simple daily habit tracker. The user picks a date, adds habits for that date, and ticks them off when done. The app has **only one page: Home**. There is no bottom navigation, and no separate Stats, Streaks or Settings pages.

2. Goals

- Add habits date-wise, quickly.
- Mark habits done and see daily progress.
- See weekly progress through a small stats popup opened from the Home header.
- Keep the UI plain, clean and easy to use.

3. What Is Removed

- Bottom navigation bar (Home / Stats / Streaks / Settings).
- Streaks page (heatmap, perfect days, streak list).
- Settings page (dark theme, week-start toggle, daily reminder, hide completed, reset data, developer credit).
- Welcome / onboarding screen.
- Dark mode. The app is light only. Week always starts on Monday.
- Any separate Stats page or Stats section. Stats only opens as a popup (see 5.8).

4. UI Style (Normal, Not Premium)

- Plain white background, solid light-grey borders, simple flat cards.
- No glass/blur effect, no gradients, no glow shadows, no heavy animations.
- One accent colour: red (#DC2626). Green (#10B981) for the done tick.
- Font: Inter (fallback system sans-serif).
- Standard corner radius (12 px) on cards, buttons and inputs.
- Large tap targets (min 40 px). Layout max width 560 px, centred.

5. Home Page – Features

5.1 Header

- Small red label above the title: **TODAY** if the selected date is today, otherwise the weekday name (e.g. FRIDAY).
- Title: selected date in full (e.g. October 21, 2026).
- **Stats icon button** (bar-chart icon) on the right side of the same row. Tapping it opens the Stats popup (5.8).

5.2 Date Strip

- Horizontally scrollable row of date chips: weekday (MON, TUE…) above, date number below.
- Range: 60 days before today to 90 days after today.
- Selected date has a solid red background with white text. Today (when not selected) shows red text.
- On load, the selected date is scrolled to the centre.
- Tapping a chip changes the selected date and refreshes the list.

5.3 Filter Tabs

- Three pill tabs: **All**, **Pending**, **Done**, each with a count.
- Active tab is solid red with white text.
- Counts are for the selected date only.

5.4 Progress Card

- Text: "X of Y habits done" and a percentage on the right (red).
- A thin progress bar below, filled in red according to the percentage.
- Shows 0% when there are no habits.

5.5 Habit List

Habits for the selected date, sorted by start time (habits without a time go last). Each habit is a simple card with:

- Icon in a small rounded square.
- Habit name (single line, truncated if long).
- Meta line: time range (e.g. 6:00 AM – 7:00 AM), category, and streak count with a small fire icon if the streak is above 0.

- Priority chip: Low (green), Medium (orange), High (red).
- Round checkbox on the right. Tap to mark done or undone (green tick, name gets a strike-through when done).
- Tapping anywhere else on the card opens the Edit sheet.
- **Future dates:** the checkbox is dimmed and cannot be ticked.

Streak rule: habits with the same name (case-insensitive) are treated as one habit. Streak is the number of consecutive days, ending today (or yesterday if today is not done yet), on which that habit was completed.

5.6 Empty State

- If no habits exist at all: seed icon, "No habits yet", "Add your first habit to start tracking."
- If habits exist but none for this date: calendar icon, "No habits for this day", "Tap + to add one for this date."
- A **+ New habit** button is shown in both cases.

5.7 Add / Edit Habit (Bottom Sheet)

Opened by the floating **+** button (bottom right) or the **+ New habit** button. Tapping a habit card opens the same sheet in edit mode.

Fields:

1. **Habit name** – text, max 40 characters, required. Placeholder: "e.g. Morning Run".
2. **Icon** – opens an icon picker with 6 groups of 8 icons: Food & Daily Life, Work & Study, Fitness & Health, Entertainment, Personal & Home, Time & Planning.
3. **Category** – picker with: Food, Work, Study, Gaming, Fitness, Shopping, Personal, Reminder, Other.
4. **Date** – opens a month calendar picker. Defaults to the currently selected date.
5. **Start time** and **End time** – optional time inputs.
6. **Priority** – picker with Low, Medium (default), High.
7. **Details / Notes** – optional multi-line text.

Buttons: **Cancel** and **Save Habit**. In edit mode, a **Delete habit** button is also shown (red text, asks for confirmation). Saving without a name shows a short error and does not close the sheet.

A habit belongs to exactly one date. To repeat a habit on another day, the user adds it again for that date.

5.8 Stats Popup (opened from the header icon)

This is **not a page or a section**. It is a bottom sheet / popup over Home with a close (X) button. There is no navigation to another screen.

Contents:

- **Week selector:** previous and next arrows with a label ("This week" or a date range such as 13 Oct – 19 Oct). The user cannot go to future weeks. Week starts on Monday.
- **Two summary cards:** Week completion % and Habits completed (done/total).
- **Daily completion:** 7 simple bars (Mon–Sun) showing the completion % of each day. Days with no habits show "–".
- **By habit:** one row per habit name with done/total count, percentage and a thin progress bar for the selected week. If nothing is scheduled: "No habits scheduled this week".

6. Data Model (LocalStorage)

Key: `auraTracker.v1`

```
{
  habits: [
    { id, name, icon, cat, date (YYYY-MM-DD), st, en, pri, notes }
  ],
  log: { "YYYY-MM-DD": [habitId, habitId, ...] }
}
```

- `icon` stores the icon class name (e.g. fa-dumbbell).
- `pri` is one of low, medium, high.
- `log` stores the ids of habits marked done for each date.
- All data is saved on every change and loaded on app start.

7. Rules and Edge Cases

- Deleting a habit also removes it from the done log.
- Date calculations use the device's local time.
- Progress and tab counts update immediately after every tick, add, edit or delete.
- The app works fully offline after the first load (icons and font load from CDN; use fallbacks if they are not available).
- Safe-area padding for phones with notches or gesture bars.

8. Out of Scope

Login, cloud sync, notifications and reminders, dark mode, repeat/recurring habits, data export or reset, separate Streaks view, separate Stats page.

9. Acceptance Checklist

- App opens directly on Home (no welcome screen, no bottom nav).
- Only one page exists in the code (no Stats / Streaks / Settings pages).
- Stats icon in the header opens the stats popup and it closes properly.
- Adding, editing, deleting and ticking habits all work and persist after refresh.
- Future-date habits can be added but not ticked.
- UI is flat and simple: no blur, gradients or glow effects.
